

Using My Recent Content

My Recent Content enables you to find content that you recently created or modified. This "Recent Content" corresponds to the time interval preceding the query. By default, this time interval is set to 5 minutes, but your Administrator can modify this value, between 1 minute and 30 minutes. The UI gives you the time of the last indexing operation.

My Recent Content shows a maximum number of 1,000 results.

- Important:**
- When using this feature, the Top Bar search field becomes unresponsive as it does not need any user input. To make it responsive again, select **Search** from the secondary search menu and launch a query.
 - **My Recent Content** cannot show the Thumbnail preview.

1. In the **Search Results** panel, click  **My Recent Content**.
2. **Optional:** If you deactivate the **6W Lifelike Search experience** mode,  **My Recent Content** shows the following options:

Option	Description
Search in my recent content	Shows recent content filtered by the search criteria of your original search. My Recent Content does not take into account tag filters and any other additional criteria like conditions passed to the query.
Show all	Shows all recent content.
