

About 6WTags

6WTags can display 6 **W** categories:

 **What**,  **Who**,  **When**,  **Where**,  **How**,  **Why**.

Almost everything on the **3DEXPERIENCE** platform can use 6WTags to make it easier to organize the content stored there.

This page discusses:

- [6WTags Used with 3DEXPERIENCE platform Services](#)
- [6WTags Used in App Widgets](#)
- [Automatically Created or User-Defined Tags](#)

6WTags Used with 3DEXPERIENCE platform Services

6WTags natively interacts with other **3DEXPERIENCE** platform Services. For example, for the 3DSwym service, you can use:

- The  **What** tag to filter on the type of content that is Posts, Ideas, Questions, etc.
- The  **Who** tag to see the persons who intervened on the content.
- The  **When** tag to focus on a specific date range.
- The  **Where** tag to focus on a geolocation or a source.

6WTags Used in App Widgets

6WTags do not apply only to **3DEXPERIENCE** platform Services. All app widgets using the 6WTags protocol can also show 6WTags to reveal and filter information.

6WTags are typically useful to organize the content of any kind of design data uploaded to a 3D Space or 3DDrive. Even non-design data, such as simulation results or Office documents that are stored on the platform, can make use of 6WTags.

Automatically Created or User-Defined Tags

Tags are either extracted from the content automatically (implicit tags) or user-defined (explicit tags).

The administrator can customize implicit tags.
