

## Focusing on Preferred Types

As a huge number of types and subtypes are available in **3DEXPERIENCE** applications, you might want to find quickly a consistent subset of this data. You can use preferred types to concentrate on this data.

Before you begin: The Administrator has defined a list of preferred types.

For more information, the Administrator can see *Installation and Setup* | *3DEXPERIENCE Platform* | *3DEXPERIENCE Platform Administration* | *3DSearch (Federated Search)* | *Configuring the 3DSearch and 6WTags Default Display*.

### 1. Click in:

- The Top Bar search field.
- The Advanced Search **Type** field.

The first seven preferred types appear at the top of the list.

### 2. If you select a preferred **Type** in the Search menu, the **Advanced Search** opens, with this **Type** selection, and **3DSpace** as selected data source.
