

Using My Content

This section describes how to display your personal indexed content using **My Content**.

- Do the following:
 - In 3DDashboard, or in a desktop app with the new search dropdown:
 - a. Click the Top Bar **Search** field.
The search dropdown opens.
 - b. If any, clear the characters that you entered in the search field.
 - c. From the search dropdown, click **My Content** to open all the **My Content** results.
 - In a desktop app with the previous search dropdown: In the Top Bar **Search** field, click , and select **My Content**.

Important: When using this feature, the Top Bar search field becomes unresponsive as it does not need any user input. To make it responsive again, select **Search** from the secondary search menu and launch a query.

6WTags display the following facets.

Facet	Displays
My Favorite Content	All content for which you have created favorites in a navigation app or an authoring app.

Facet	Displays
My Favorite Searches	All the persistent searches you have created. You can share or unshare Favorite Searches using the context menu.
My Other Content	All content you are owner for but that you did not selected as favorite.

Notes:

- Searching with criteria `#myContent` gives the same search result as selecting **My Content** from the secondary search menu.
- In Datagrid View, if you select **Settings > Manage grid view customization**, you see columns for the tags you selected previously. For example, if you selected "**Favorite searches**", the **Customize Search Result Detail View** panel displays the * **Favorite searches** column, and you see this column in the final datagrid view.
