Exporting Results

In **Datagrid** view, you can generate a report of the search results displayed on the screen, and export it to `csv`.

Important: 3DSearch only exports the results displayed on the screen, that is 200 results by default. The Administrator can increase this number up to 1000 results. Whatever the number of results specified, the `csv` file contains the number of displayed results only.

Before you begin: You must be in ☰ **Datagrid View**.

- In the **Search Results** panel, click ⌄ and select ⤓ **Export**.

3DSearch saves the results displayed in the **Search Results** panel in a `csv` file.

Note: You can use the Search ⚙ **Settings CSV separator** option to choose the separator.
