Calling Back the Last Search

This feature only applies to indexed content, therefore, you cannot call back **Favorite Searches**, **My Recent Content**, and **Search in Current Tab**. 3DSearch does not keep either BI tools applied in the 6WTags.

- To call back the last search, click ⌄ in the search box and select ⚲ **Last Search Result**.

The callback also applies the filtering made with 6WTags.

If you have cleared the **Search** box, clicking 🔍 fills the box with the previous query string and runs it again.

Note: In desktop apps, for **Advanced Search**, **Favorite Searches** and **My Content**, when the **Search Results** widget is:

- Hidden - clicking 🔍 opens the **Search Results** widget.
- Open - clicking 🔍 relaunches the last query.
